Hi ***<Tools Team, Member 1>***,

This is not an important change. I don't see any issue if you prefer to receive these emails and you don't make any change.
<Team 1, Member 1>'s email was just an observation and suggestion not a request.

Regards,
- ***Morteza***

<Team 1, Member 1>,

If your concern is to limit/avoid commit emails, I have already provided a way to achieve it. Is that not working for you?

Please note, we don't make change in ***<Internal git wrapper>*** frequently. Changes are generally clubbed and pushed together in 2- to 3-month time as we need to test them thoroughly.

I don't think this change is important enough to be done quickly—especially when you already have way to achieve it. The change should be in with next lot ***<Internal git wrapper>*** changes (1 to 2 months).

BTW, thanks for taking time and pointing out the change needed but I already knew it.

Regards,
<Tools Team, Member 1>

Hi ***<Team 1 Member 1>***,

We should not make any change in ***<Internal directory>***. This area should be only modified by ***<Tools Team>***.

Regards,
- ***Morteza***

Hi ***<Team 1 member 1>***,

I found where '***`<Tools Team, Member 1 email>`***' email is injected in ***<Internal script>***:51.

I can help out and remove it if you want me to.

Cheers,
<Team 1, Member 1>

Thanks for the hint. Will give it a try.

I understand the need to be notified when pushing into remote repository, however pushing into local and private branch certainly seems like noise to me. On top of that, I do see your email address on every local commit!

Cheers,
<Team 1, Member 1>

<Team 1, member 1>,

What seems noise for you was one of requirements from users during Git migration.

Anyways, you can avoid getting "commit email" by running below command:

%*<Internal git wrapper>* config --global commit.email false

P.S. This is a user specific setting for a given site (e.g., *<example site>*).

Regards,
<Tools Team, Member 1>

Changing title as I realized this message might have gone to unmonitored folder.

Cheers,
<Team 1, Member 1>

Hi *<Tools Team, Member 1>*,

Can you please remove the hook that send emails when pushing into private branch? Those emails are noise as this is not production repository.
